-

Projects

Mutant: Airnav employee mutation system

Jember

Jun, 2024 - Present

Mutant is an employee mutation system for Airnav company. It was use Laravel to build the entire project. The project was built in 3 months and successfully deployed in development server. The project is still in development phase but scheduled to be release at September, 2024.

Personal

Jember

Jan, 2024 - Present

Personal is a personal portfolio website that I create to store all of my portfolio and blogs. The project was built using Sveltekit and TailwindCSS. The project was built in 1 week and successfully deployed in Vercel. The project is still growing depends on my growth.

TJSL Biofarma

Yogyakarta

Feb, 2024 - Jun, 2024

TJSL Biofarma is the project that I work on when I was an intern at BigIO. The project was run for a couple of years and I was assigned to refactor the project to reduce the project size and fix the bugs. The project was built using ReactJS as the frontend and ASP.NET as the backend. I was able to reduce the project size by more than 20% and fix a crucial database bug that make the backend application cannot manipulate the data.

Anime App

Jember

Jan, 2024 - Feb, 2024

Anime App is a scrapped anime web app that I create when I was a teach assistant at Fasilkom Software Engineering Laboratory. The project was built using Typescript and I was able to finish the project in only 1 week. The project was built to help me and my friends to stream anime online. I trying to make the project as simple as possible with separating the domain of each feature.
